

CASE STUDY WIRRAL METHODIST HOUSING

THE CHALLENGE

Wirral Methodist Housing (WMH) has around 40 housing blocks on the Wirral, where the management of fobs for use at the communal doors and collation of usage reports was done by the management team. This took up considerable time & wasn't very effective. As a result of this WMH took the decision to look for a new communal door access solution.

THE REQUIREMENT

WMH looked for a new communal door access solution that gave them the ability to add or delete fobs remotely without the need to visit the block. They also wanted to reduce time when they or other agencies needed to obtain accurate and up to date reports of fob activity at specific blocks during investigations.

SOLUTION

Having met KMS at the Housing Exhibition in Manchester, WMH subsequently met with Tim Rogers (of KMS) and realised that an existing installer already worked with KMS. The KMS SimpleKey Web system delivered exactly what WMH needed and in 2014 the project to convert all their blocks was started.

RESULTS

Since initiating the project, half of the blocks have been converted with the remaining ones planned over the next couple of years. The results have been impressive, with a significant reduction in time to add and delete fobs and compile reports on block access activity.

John Harris, Property Surveyor for WMH:

"SimpleKey Web does what it says on the tin, we can now control the communal access systems from anywhere and from any web enabled device. The time saving has been considerable and the support from KMS is superb."
